

A NEW JOURNAL IN THE HISTORY OF MATHEMATICS

We are pleased to announce the publication of the first issue of *Bollettino di Storia delle Scienze Matematiche*, a journal published by the Unione Matematica Italiana. The journal is dedicated to the publication of research in the history of the mathematical sciences, including astronomy, mechanics, and mathematical physics. It will include bibliographical articles, correspondence, unpublished manuscripts from the past, and original articles on various aspects of the history of mathematical thought. The name of the journal is reminiscent of the *Bollettino di Bibliografia e di Storia delle Scienze Matematiche e Fisiche*, the famous *Bollettino* of Boncompagni. It was chosen to pay homage to a journal which, during its twenty years of life (1868-1887), was a prestigious point of reference for scholars in the history to the sciences. In the words of its editors, "it also represents, without underestimating the changes in interest and taste that have occurred over the last century, a methodological direction: A method of investigation which acknowledges the point of departure for the historian's work in the accuracy of bibliographic and philological research and the precision of textual analysis.

Those wishing to obtain further information may write to: *Bollettino di Storia delle Scienze Matematiche*, La Nuova Italia, Via Giacomini 8, 50132 Firenze, Italia.
